ONLYX

ONYX

The Onyx furniture panel joins the collection of matt surfaces of Forner furniture materials, which facilitate the creation of beautiful interiors.

The Forner Onyx furniture panel stands out for its highest level of matte finish and a very durable yet incredibly subtle to the touch surface. Thanks to its unique haptic properties, it feels silky to the touch while being resistant to scratches and moisture. Fingerprints do not remain on the Forner Onyx furniture panel, and the material itself has been tested and approved for food contact. Due to its properties, the Onyx furniture panel is perfect for everyday use in all types of interiors - whether used as a vertical or horizontal element. The Onyx furniture panel is a furniture material that can be used in any space, both private and commercial - from the hallway, through the living room, kitchen, bedroom, and ending in the bathroom.

RESISTANT

Easy to clean

Cleaning ONYX furniture panels is incredibly easy. For everyday stains such as coffee, tea, oil, wine, pencil marks, etc., simply use water, a damp cloth, or a melamine sponge to wipe the stain away. If the stain has dried, soak it with a damp cloth for a minute and then wipe it off.

For tougher stains like pen marks, markers, lipstick, etc., use detergent or acetone and wipe the stain with a paper towel or a melamine sponge.

Water proof

ONYX furniture panels are moisture-resistant, allowing for their use not only in living rooms and bedrooms but also in bathrooms and kitchens.

Extreme scratch resistant

The decorative surface of ONYX is comprised of paper impregnated with acrylic resin, which is hardened using EBC in a unique manufacturing process. This technology ensures an exceptionally long lifespan of the surface and high scratch resistance.

Anti-fingerprint

To enhance aesthetics and ensure ease of maintenance, the ONYX collection is characterized by technology that reduces fingerprint residue on the surface.

Micro scratch repair

The advanced ONYX surface allows for the removal of micro-scratches using a melamine sponge, which translates into the durability of the panel.

Food safe

The ONYX surface has been tested and approved for contact with food, making it an ideal matte surface for use in the kitchen.

ONYX

TYPE & SIZE

Core: MDF

Thickness: 19mm

Format: 2800x1300mm

Texture: doublesided ONYX

PRODUCT SPECS

The ONYX coating is made of colored-through wood pulp impregnated with acrylic resin. To achieve an extremely resistant surface, the ONYX laminate undergoes electron beam curing (EBC) in the final stage of production..

The production of the ONYX surface is conducted without the addition of any solvents or formaldehyde.

The wood pulp used for ONYX coating production comes from FSC® certified forests.
